

Group 0 Elements / Rare Elements / Inert Elements

- Are gases at room temperature and pressure
- Are non reactive because they have a complete outermost shell with electrons.
2 electrons apart from He which has 2 electrons
- Are monoatomic (He, Ne)
with low ~~and~~ boiling and low melting points
-

Uses of group 0 Elements

1. Helium (He) used in balloons because of low density
2. Neon used in glowing tubes - glows red when hot
3. Argon used in light bulbs because it is unreactive
